Wed looked around, but were hesitant, since we loved our present system. THEN, we came upon this advanced Denon device via researching a unit at a Best Buy that we were told would work for us. Well, it not only enhanced our old system in a major way, particularly soundwise, but totally replaced 3 of the older units, downsizing the space required.

Theyre audible and very much alive. When I switched it to another input it was great though. It is a simple devise as long as you only have simple requests, but the more complicated obviously youll need to get help from the instruction manual. This unit stopped working on me i think overheated so It is now being fixed under warrantly since DakDepot is an authorized distributor. thank god. So in general, sounds good, read to manual for help, wierd phono reception, and if buying refurbished make sure to purchase from an authrized dealer. Please try again later. consult the manual for basic operation. Programming in stations wasn't hard either. But even so, this is a fairly picayune matter considering that a receiver is a device for listening to music and other audio sources and should be evaluated as such. What matters most is sound quality, and this receiver sounds excellent. No, it's not an audiophile product, but it's probably the best sounding receiver you'll find in production for this price range. I've had mine for a few months and I'm very satisfied. I have it driving a pair of JBL HLS610s which I consider to be about the same grade of product massmarket midfi producing great sound at an affordable price. Overall the sound is very pleasing; the bass is palpable and detailed, the highs are clear and smooth. The detail at low volumes is impressive, which in my opinion is what distinguishes a good amplifier from one that's just loud. About the best thing one can say about a stereo component is that it allows them to hear things in their music they hadn't noticed before. This receiver has delivered that consistently. The phono stage is particularly nice; my records have never sounded better. If I have any complaint about the product, it's that it's a bit bulky. I understand this is an artifact of the design. Still, it takes up a lot of room on the shelf. Also, the volume knob feels clunky. I'll repeat that this stereo is not in league with truly highend integrated amps or separates. You have to be prepared to spend a lot more money to get that level of performance not to mention the cost of an audiophile inputs and loudspeakers. But if you're on a budget, or just don't want to pay at least twice as much for incremental improvements in sound, don't overlook this stereo. It might be the best value going. Paired with a nice meal, candlelight and friends, it's gonna taste great. Most all of my gear is midphi and I'm a satisfied customer. Skoch 5.0 out of 5 stars I think I know my stuff, and I KNOW I can tell a low distortion signal when I hear it. This receiver is awesome. The THD .008% is so low I can hardly hear any imperfection in music, even at high volumes. I am driving a pair of old Advents, and they sound terrific. The fact that this receiver is stable with 4 ohm speakers is a big plus for me. Rise time is fast quick pulses of bass sound great, and high frequency response is awesome. I do not find it difficult to use at all. It has lots of flexibility for routing signals, too. Can't say enough good things about this receiver. Glad I chose it. Please try again later.
