It varies by site of measurement and it tends to decrease with age. It also varies from person to  
person and fluctuates throughout the day. Therefore, it is important to determine normal  
temperature ranges. A measurement taken in the right ear may differ from the measurement taken  
in the left ear. Therefore, always take the temperature in the same ear. The ear must be free from  
obstructions or excess earwax buildup to take an accurate reading. External factors may influence  
ear temperatures, including when an individual has. In these cases, remove the individual from the  
situation and wait 20 minutes prior to taking a temperature. It has to be clean and intact to ensure  
accurate readings. Do not use cleaners other than alcohol on the probe tip. Use of other cleaners  
could damage the tip. If the probe tip is damaged, please contact your authorized local service  
center. Do not use abrasive cleaners.

Never submerge this thermometer in water or any other liquid. Store the thermometer and  
disposable lens filters in a dry location free from dust and contamination and away from direct  
sunlight. Press and hold down the button. This will reset the thermometer to the new temperature  
scale. Insert new battery when the low battery symbol appears on the display. Open the battery  
compartment by inserting a narrow pointed object such as a ball point pen or paperclip into the  
small hole above the battery door 8. While pressing into the hole slowly slide back the battery door  
with the other hand. If used according to the use instructions, periodic calibration is not  
required. The last identifiers are the letters that represent the manufacturer. IP22 Protected against
